

We are proud and excited that this year's CSR initiative is with Missing Maps!

Why Missing Maps?

This organization mission is to put the world's vulnerable communities on the Map. Each year, disasters around the world kill nearly 100,000 and affect or displace 200 million people. Many of the places where these disasters occur are literally 'missing' from open and accessible maps and first responders lack the information to make valuable decisions regarding relief efforts. Missing Maps is an open, collaborative project in which we can help to map areas where humanitarian organizations are trying to meet the needs of people who live at risk of disasters and crises. We as engineers can easily help and make a difference.

What is a Mapathon

An evening where we meet up at the office to trace satellite imagery into open street maps and add local detail such as neighborhoods, street names, and evacuation centers. Humanitarian organizations can then use the mapped information to plan risk reduction and disaster response activities that save lives. No prior knowledge on the subject is needed. Everyone can join!
